Title: ELECTRONIC MEASURING DEVICE FOR DETECTING A PROCESS VARIABLE, IN PARTICULAR A RADAR OR ULTRASONIC FILLING LEVEL MEASURING DEVICE, AND A METHOD FOR OPERATING A MEASURING DEVICE OF THIS

IN THE ABSTRACT OF THE DISCLOSURE

Please amend the Abstract as follows:

The invention related to a method and an electronic measuring device for detecting a process variable connectable to a two-wire line (101) for providing the supply energy and for digital communication with a process control, and a method for operating such a measuring device. An inventive measuring device emprises includes a sensor means (114, 115, 123, 124; 314, 315, 323, 324) for measuring the process variable, a controlling device (117; 317) for controlling components of the measuring device, a voltage measuring device (116; 316) for measuring the supply voltage applied through the two-wire line (101), and a current control unit (122; 322) by means of which the current for supplying the measuring devices can be modified in a temporally appropriate manner as a function of the supply voltage measured by the voltage measuring device (116; 316) (9; 316).
